

Livestock Fencing

Overview

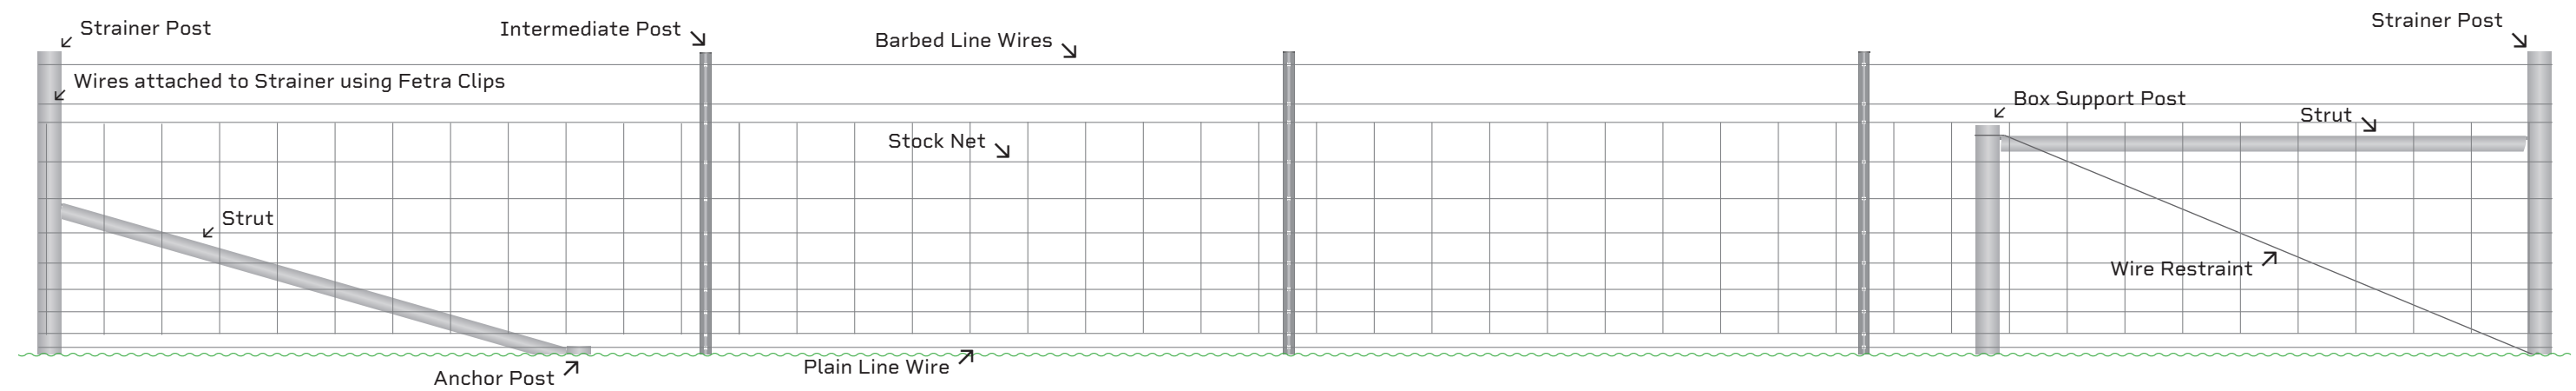

The perimeter fence for a livestock field will typically consist of a quality stock net, which is tensioned between the strainer posts, and then clipped into steel intermediate posts with 2 lines of barbed wire above, and a single plain line wire below.

Alternatively it may have electrified line wires with clip on insulators.

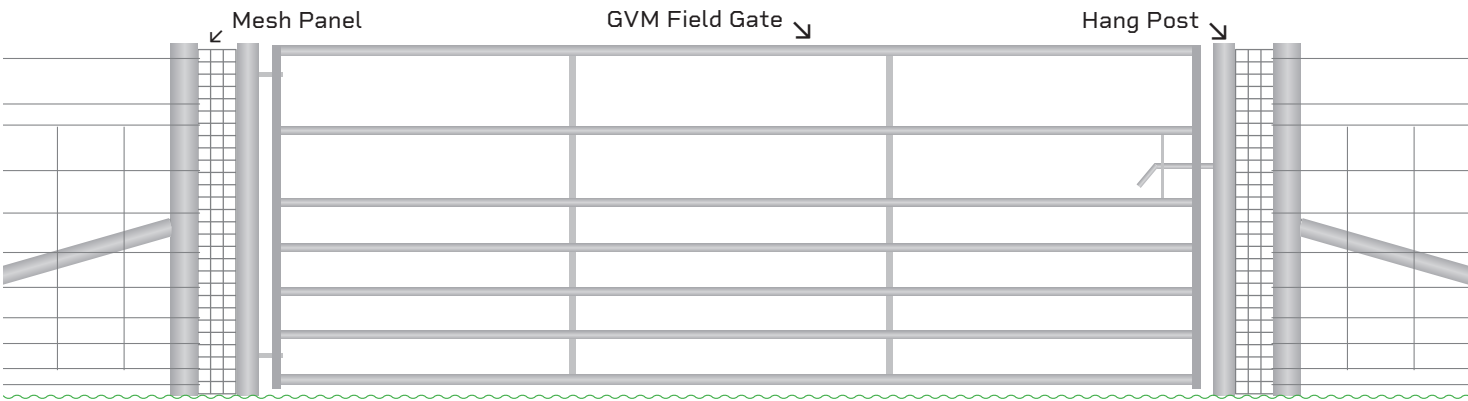

The intermediate and strainer posts are driven into the ground using a machine mounted post driver, and depending on the ground conditions, the use of a rock spike or auger is recommended, as this ensures clean and regular driving of the posts.

Key Features of the Fetra Fencing System

- Cold rolled structural steel (S250) intermediate posts with a specialist long life zinc/magnesium/aluminium coating (GDZMA310).
- Intermediate posts are designed to spread during insertion, to prevent unwanted lifting/theft.
- Patented clips for quick attachment of the net and line wires
- Fast fit strainer system, simply slots together.
- Strainers have pre-drilled holes for inserting the strut(s) at 90°, 135° and 180° angles.
- Strainers have anti-lift tabs to prevent unwanted lift during net tensioning.

| Typical Components List - Livestock Fencing  |                    |
|----------------------------------------------|--------------------|
| Product Description                          | Quantity per 1000m |
| HT8/80/15 or R8/80/22 Livestock Netting 250m | 4                  |
| HT Line Wire 2.5mm 650m                      | 2                  |
| HT Barbed Wire 2 x 2mm - 2000m               | 1                  |
| Strainer Posts (S23) 2400mm                  | 10-12              |
| Struts (S33) 2000mm                          | 20-24              |
| Anchor Post Ø89 x 800mm                      | 20-24              |
| Intermediate Posts (P22H or P23F)            | 240                |
| Fetra Clip Small - Pack 50 (A56/50)          | 2-4                |

| Typical Components List - Field Gate                |          |
|-----------------------------------------------------|----------|
| Product Description                                 | Quantity |
| GVM Field Gate Galvanised 1143mm high               | 1        |
| Hang Post for Field Gate Galvanised Ø114 x 2000mm   | 1        |
| Slam Post for Field Gate Galvanised Ø114 x 2000mm   | 1        |
| Fast Set Postcrete 20kg                             | 4-6      |
| Heavy Welded Mesh Panel 2400x 1200mm 10G Galvanised | 1        |
